

NO MORE

WRONG WAY

The CIS v32 4 Direction Bill Reader

JUST

4 WAY

The CIS v32 reads any USD bill, 1990 or newer, no matter the orientation! The CIS v32 approves the bill using Ultra Violet, Magnetic, Infrared, and Water Mark detection. Saving time and money, the CIS v32 is fast enough to check any bill in less than one second. After a bill is validated, a GREEN LED CHECK MARK will light if the bill passes inspection or a RED LED X will light if bill is suspect.

The CIS v32 has a *removable bill catcher* that collects the bills that have passed through the machine and are validated as good currency.

The CIS v32 is fast, economical, and easy to use. The *clamshell design* make it easy to clean and easy to clear jammed bills.

It will keep counterfeit bills out of your tills and away from your bottom line.
